

<b>Jerimum Cima</b>				
An important garimpo with coincident gold-in-soil anomaly located approximately 3 kms ENE of Central, which covers an area of approximately 850m by 1km. Sheeted veining and stockwork mineralization within historic garimpo workings returned 84m @ 1.6g/t Au in a continuous channel sample. Limited drilling of 7 holes returned values up to 39m @ 5.13g/t gold. Drill results from an initial seven holes at the Jerimum de Cima target, 3.2 km ENE of the Central target zone soil anomaly are as follows:				
<b>Drill Hole</b>	<b>From (m)</b>	<b>To (m)</b>	<b>Interval Width (m)*</b>	<b>Gold (g/t)</b>
