

## Other Targets

Hole ID	From (m)	To (m)	Interval Width (m)*	Gold (g/t)
<p><b><u>Babi:</u></b> Drilling of three holes, (DDH 85, 87 and 89) totaling 667.5m on the Babi target located approximately 800m north of Central was completed. Babi is a coincident gold-in-soil geochemical and magnetic anomaly, which spans the main stream at Cuiu Cuiu. Whilst no significant gold mineralization was intersected in any of the three holes, thus far only the southern portion of the anomaly has been tested. Further drilling on the northern part of this target is planned for 2011.</p>				
<p><b><u>Baixão de Onça:</u></b> is located east of Moreira Gomes anomaly. Reconnaissance soil sampling has been completed. Channel sampling at the main garimpo pit returned 15m @ 2.6g/t Au.</p>				
<p><b><u>Ratinho:</u></b> is located 6km NW of the Central anomaly in an area hosting numerous garimpo pits. High grade veins returned values of 0.6 - 63.3g/t Au.</p>				
<p><b><u>Nova Limão:</u></b> area is a currently active alluvial/saprolitic pit measuring 350m x 100m located 8km west of Central anomaly. Reconnaissance sampling is in progress.</p>				
<p><b><u>Escondido:</u></b> is a large area (4x3km) of Quaternary cover located on trend between Jerimum de Cima / Jerimum de Baixo and Nova Aliança areas. Small creeks draining the area are auriferous.</p>				
<p><b><u>Nova Aliança:</u></b> is in the eastern part of the claim block. It has numerous garimpo pits. Limited soil sampling has been completed over the area.</p>
